

## REBREATHER LIFT BAR (AP Inspiration & Evolution)

These lift bars will fit AP Inspiration & Evolution rebreathers. Made from stainless steel, this unit enables safer two-handed lifting and allows for more manageable buddy assistance when carrying your rebreather. The unit has two corner lashing eyes to allow rope to be secured without slipping. The lift bar will also protect hoses at the top of the unit. The low profile design permits the assembled unit to fit in the AP rebreather shipping box.

Easy to fit: simply remove the webbing handle that is provided on your rebreather, align the lift bar bolt holes in the same slots and clamp the casing using the backing plate with the four countersunk screws.
