

REELS

With safety in mind, Custom Divers have developed the reels illustrated. The reels have been designed so that all operations are made from one side. All the above reels are totally reversible to enable usage by left-handed as well as right-handed divers. The frame is also adjustable for various hand sizes. The reels are available with 50mtr and 125mtr of 2mm line with a breaking strain of 98kg with a choice of white, neon yellow or pink line. The frames for these reels are made from stainless steel and the Spools are made of polycarbonite. All other fittings to our reels are made from stainless steel.
