

TANK/WING
QUICK RELEASE
COUPLING

This dual purpose coupling offers a new way in which to mount your wing system to twin or single cylinder configurations. Fitting is straight forward; first mount the female part of the coupling in the middle of your twin-set via the bolts that secure your stainless steel cylinder twinning bands or to your single tank via cam bands or stainless steel 'jubilee' bands. The male part of the coupling is attached to the wing system by using the two M8 female mushroom fittings provided. To fit, simply sleeve one into the other and lock off with the securing R-clips. This coupling is particularly useful when mixing and matching cylinder sets for different gas mixes and when refilling. Additional female fittings are available for this purpose. The materials used are stainless steel.
